INDEX: VOLUME 34

AUTHORS AND SUBJECTS

Abstract systems, 239–252.
Allais paradox, 46–52.
Antarctica, 253–271.
Anxiety-linked inhibition, 16–45.
Approval voting, 53–60.
Artificial intelligence, 305–311.
Artificial systems, 239–252.
Astronaut, 207–227, 253–271.
Bedeian, Arthur G., Kemery, Edward R., and Mossholder, Kevin W. Testing for cross-level interactions: An empirical demonstration, 70–78.
Behavioral decision theory, 286–288.
Behavioral learning, 229–237.
Behavioral sciences, 207–227.
Behavioral systems analysis, 81–127.
Bierman, Harold, Jr. The Allais paradox: A framing perspective, 46–52.
Bierman, Harold, Jr. A behavioral decision theory paradox, 286–288.
Biological sciences, 207–227.
Binary choice, 161–175.
Blum, Gerald S. A computer model for unconscious spread of anxiety-linked inhibition in cognitive networks, 16–45.
Carling, Alan H. Symmetry and social division: More on binary choice with externalities, 161–175.
Class analysis, 161–176.
Clearwater, Yvonne A.: see Albert A. Harrison.
Clinical diagnosis, 305–311.
Cognitive networks, 16–45.
Cooper, Joan A: see Grahame R. Dowling.
Cross-level research, 61–69, 70–78, 239–252.
Data manipulation, 199–206.
Decision making, 286–288, 289–290.
Delprato, Dennis J: see Roger D. Ray.
Disapproval voting, 53–60.
Dowling, Grahame R. and Cooper, Joan A. Simulating the life cycles of products and services, 291–304.
East Asia, 176–198.
Expert systems, 305–311.
Felsenthal, Dan S. On combining approval with disapproval voting, 53–60.
Fox, John: see Steven Schwartz.
Framing perspective, 46–52.
Frischknecht, Federico. Comments on a paradigmatic approach to the discipline of information systems, 148–150.
Frischknecht, Federico and van Gigch, John P. The information-system-processing triad: Common core of human disciplines, 239–252.
Germana, Joseph. The biological significance of behavioral learning from a systems view, 229–238.
Griffin, Timothy: see Steven Schwartz.
Harris, Philip R. Behavioral science space contributions, 207–227.
Harrison, Albert A., Clearwater, Yvonne A., and McKay, Christopher P. The human experience in Antarctica: Applications to life in space, 253–271.
Hegemony, 199–206.
Hierarchical levels, 272–285.
Hierarchy, 239–252.
Index for 1989, 314–315.
Information processing systems, 239–252.
Information systems, 128–147, 148–150.
Interdependence, 199–206.
Isolation and confinement, 253–271.
Kemery, Edward R.: see Arthur G. Bedeian.
Le Moigne, Jean Louis: see John P. van Gigch.
Marketing, 291–304.
McKay, Christopher P.: see Albert R. Harrison.
McLeod, John. Computer simulation: A personal view, 1–15.
Mossholder, Kevin W.: see Arthur G. Bedeian.
Multilevel analysis, 61–69, 70–78.
N-person games, 161–175.
National image, 176–198.
Natural systems, 239–252.
Opportunity costs, 199–206.
Organismic uncertainty and learning, 229–237.
Organizational tasks, 272–285.
Paradox, 46–52, 286–288.
Physical and social environments, 228–237.
Political psychology, 176–198.
Power as maximizing behavior, 199–206.
Prisoner's dilemma, 151–153, 161–175.
Product life cycle, 291–304.
Rapoport, Anatol. Comments on "A behavioral decision theory paradox," 289–290.
Ray, Roger D. and Delprato, Dennis J. Behavioral systems analysis: Methodological strategies and tactics, 81–127.
Role expectation, 176–198.
Schwartz, Steven, Griffin, Timothy, and Fox, John. Clinical expert systems versus linear models: Do we really have to choose?, 305–311.
Shih, Chih-yu. A cognitive approach to international organization: Perspective and application, 176–198.
Simulation, 291–304.
Social division, 161–175.
Sirgy, M. Joseph. Toward a theory of social organization: A systems approach, 272–285.
Social organization, 272–285.
Space habitation, 207–227.
Spaceflight, 207–227, 253–271.
Spencer, Barbara A: see G. Stephen Taylor.
Strategic management, 272–285.
Strategic planning, 272–285.
Space stations and settlements, 207–227.
Simulation, 1–15, 16–45.
